

“THE CONTRIBUTION OF GMOBILITY TO CARBON NEUTRALITY”

NGVA

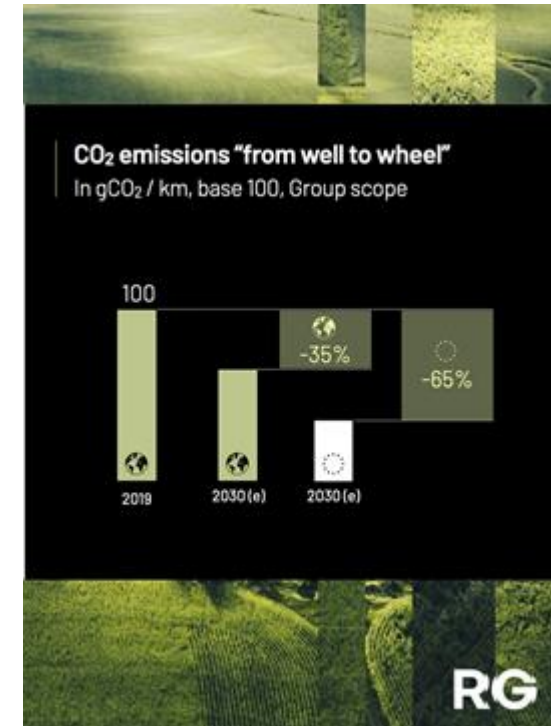

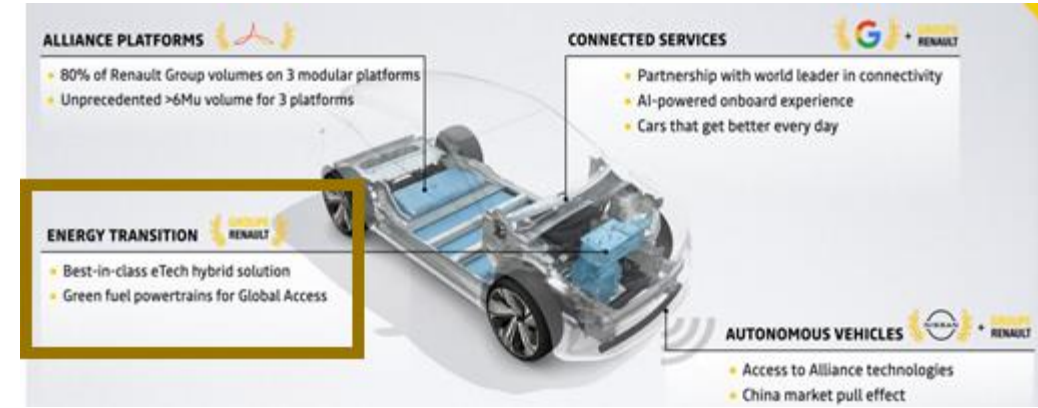

May 2021

# OUR ENVIRONMENTAL STRATEGY : KEY TAKE AWAYS

# KEY TAKE AWAYS

- Environmental Responsibility is KEY !
- The Alliance ambitions to remain a key player in the race toward decarbonization through its electrification strategy and Circular Economy historical leadership.
  - In the long term, BEV is a robust and sustainable powertrain solution in almost all markets.
- Alternative energies dedicated to the relevant usage.
  - HEV and PHEV, E-Tech + Range Extender H2.
  - Opportunities as Ethanol 2G, LPG, Bio-CNG will depend on LCA performance, energy cost, infrastructure deployment.
  - Bio CNG attractive for: **1. TCO: 2. Autonomy, 3. Environmental footprint (WtT – TtW), 4. Availability, 5. Territorial momentum and 6. Economic eco system.**
  - CNG Major roadblocks : **1. Durable & harmonized public support for bio CH4 (national / European – supply / demand), 2. Infrastructure (AFID), 3. Regulation CO2 & EURO7 (pollutants), 4. Support for deployment as the CVD**  
➔ need an active action !
- Having a HOLISTIC vision over the long term is mandatory !

THANK YOU
